DETAILED ACTION

Claim Rejections - 35 USC § 103

1. The following is a quotation of 35 U.S.C. 103(a) which forms the basis for all obviousness rejections set forth in this Office action:

(a) A patent may not be obtained though the invention is not identically disclosed or described as set forth in section 102 of this title, if the differences between the subject matter sought to be patented and the prior art are such that the subject matter as a whole would have been obvious at the time the invention was made to a person having ordinary skill in the art to which said subject matter pertains. Patentability shall not be negated by the manner in which the invention was made.

2. Claim 20 is rejected under 35 U.S.C. 103(a) as being unpatentable over the patent to Jarman et al ('184).

Col. 4, lines 3-12 and figures 1 and 3a of Jarman et al disclose a receiving beamforming apparatus that repeatedly sample echo signals. The patent specifically states that the "fixed beam ... can therefore be formed by sampling at the scan frequency the detected received sonar signals during a sampling period which is synchronized with the scanning frequency."

The apparent difference between claim 20 and Jarman et al is the claim now specifies that the scanning cycle is dependent upon the scanning frequency. However, it is obvious that the sampling period being synchronized with the scanning frequency reads upon the limitation to the scanning cycle being dependent upon the scanning frequency.

Allowable Subject Matter

- 3 Claims 1-4, 6-11, 19 and 26-33 are allowed.

Art Unit: 3662

4. This application contains claims 12-18 and 21-25 drawn to an invention nonelected with traverse in Paper No. 6. A complete reply to the final rejection must include cancellation of nonelected claims or other appropriate action (37 CFR 1.144) See MPEP § 821.01.

Response to Arguments

5. Applicant's arguments filed May 19, 2003 have been fully considered but they are not persuasive. The patent to Jarman et al discloses an apparatus wherein the scanning cycle (sampling period) is synchronized (dependent on) the scanning frequency. There do not appear to be any specific patentable distinctions between the Jarman et al patent's structure and claim 20.

Conclusion

6. Applicant's amendment necessitated the new ground(s) of rejection presented in this Office action. Accordingly, **THIS ACTION IS MADE FINAL**. See MPEP § 706.07(a). Applicant is reminded of the extension of time policy as set forth in 37 CFR 1.136(a).

A shortened statutory period for reply to this final action is set to expire **THREE MONTHS** from the mailing date of this action. In the event a first reply is filed within **TWO MONTHS** of the mailing date of this final action and the advisory action is not mailed until after the end of the **THREE-MONTH** shortened statutory period, then the shortened statutory period will expire on the date the advisory action is mailed, and any

Art Unit: 3662

extension fee pursuant to 37 CFR 1.136(a) will be calculated from the mailing date of the advisory action. In no event, however, will the statutory period for reply expire later than SIX MONTHS from the date of this final action.
